

Anti-exceptionalism and Feminist Logic

a philosophy talk by

Gillian Russell

Dianoia Institute of Philosophy, ACU

This is a paper about how anti-exceptionalism in the philosophy of logic makes room for there to be feminist logic. Anti-exceptionalists in logic think that logic is continuous with the other sciences. But lots of philosophers of science think that there can be feminist science. So if you are an anti-exceptionalist, could there also be feminist logic? The paper will look at the different things that people have meant by "feminist science" and consider whether it makes sense to translate any of them to logic. The answer is: yes! There can be feminist logic.
